

Lab 2 Facilitator Briefing (Quick Readout)

What Changed

- Lab 2 now uses the existing pipeline at `projects/azure-pipelines.yml`
- The core flow is now **Validate -> Test -> Publish**
- Legacy examples (`pbi-tools`, `pbip-lint`, `SyncFabricDev`) were removed from participant instructions
- Path examples were normalized to `/projects`

What Participants Must Do

- Create pipeline from existing YAML: `/projects/azure-pipelines.yml`
- Verify stage order and green status: Validate, Test, Publish
- Check `pbip-artifacts` in the Artifacts tab
- Set this pipeline as required build validation for `main`
